DE.AUTO

CHAPTER 3

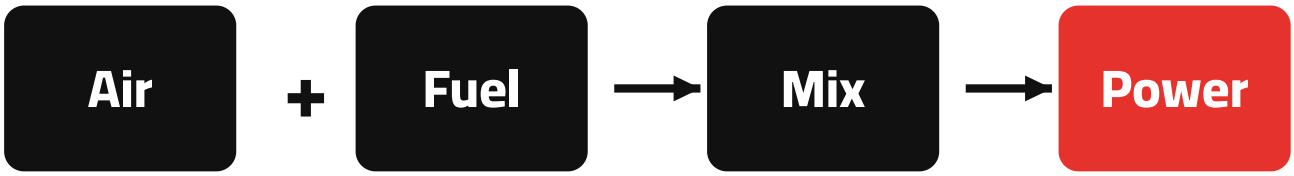

MADE EASIER

AIR & FUEL SYSTEMS

The simple version

The idea in a flash

The engine wants air and fuel in an exact ratio, and the computer sets it for you.

Simplified drawing

Just 5 things

1. 💨 Air goes from the filter all the way to the cylinder.
2. ⛽ The pump pushes fuel out of the tank.
3. 🧠 The computer adjusts the mixture by itself.
4. 📣 Knock is a banging sound. Never ignore it.
5. 📖 Your owner's manual sets the petrol grade.

• 5 words are enough

Word		What it means
Throttle		The gate that lets air in.
Fuel pump	Tarumba	Pushes petrol to the engine.
Injector	Bakhakhat	Sprays the fuel.
Mixture	Khalta	The ratio of air to fuel.
Octane		Resistance to knock.

🎯 Test yourself

🎯 Challenge 1 **What sprays the fuel?**

A) Injector B) Filter C) Throttle

🎯 Challenge 2 **Does higher octane than the manual asks for mean more power?**

A) Definitely B) Usually not

✅ **Answers:** 1) Injector. 2) Usually not.
