DE.AUTO

CHAPTER 7

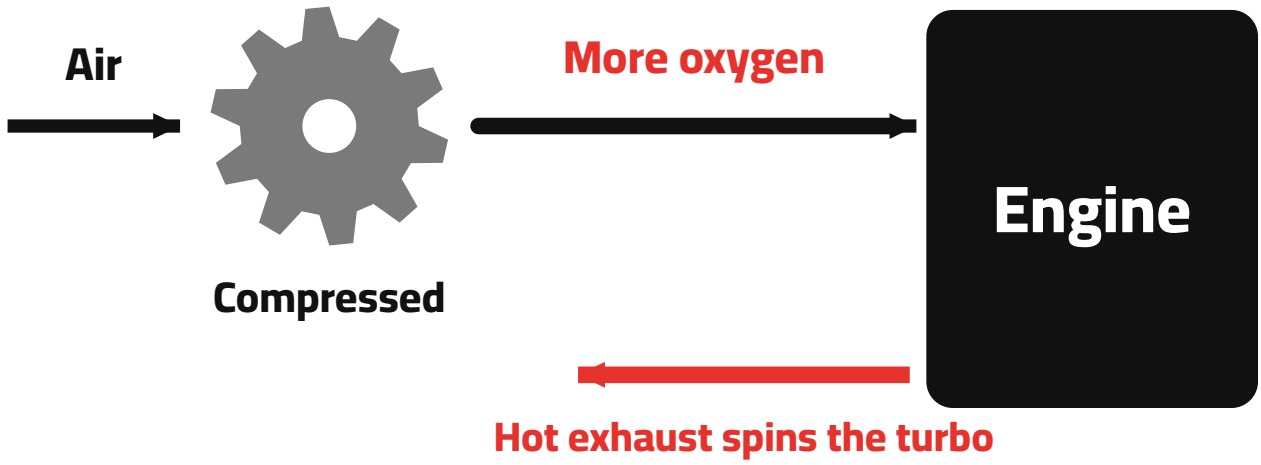

MADE EASIER

FORCED INDUCTION

The simple version

• The idea in a flash

A turbo uses the exhaust to blow more air into the engine.

Simplified drawing: exhaust gas spins the turbo, and the turbo blows more air into the engine

Just 5 things

1. 💨 **More air, more power.**
2. 🌀 **The exhaust spins the turbo.**
3. 📏 **Boost is the air pressure.**
4. ❄️ **The intercooler cools the air.**
5. 🛢️ **Clean oil protects the turbo.**

• 5 words are enough

Word	What it means
Turbo	Exhaust that blows in air.
Boost	The extra air pressure.
Intercooler	Cools the compressed air.
Turbo lag	The wait before the push.
Supercharger	Driven by the engine's belt.

🎯 Test yourself

🎯 Challenge 1 **What usually spins the turbo?**

A) The engine belt B) Exhaust gases

🎯 Challenge 2 **What does the intercooler do?**

A) Cools the compressed air B) Adds fuel

✅ **Answers:** 1) Exhaust gases. 2) It cools the compressed air.
