DE.AUTO

CHAPTER 11

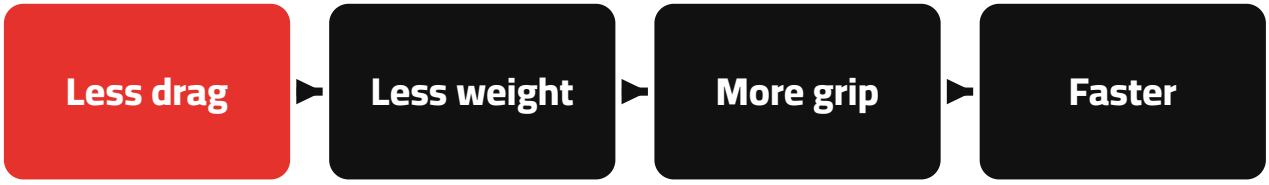

MADE EASIER

AERO & LIGHTWEIGHTING

The simple version

• The idea in a flash

Speed wants less air resistance and less weight.

Just 5 things

1. 🌬️ Air gets heavier the faster you go.
2. ⬇️ Downforce presses the car to the ground.
3. 🪽 Some wings are just for looks.
4. ⚖️ Every kilo less helps.
5. ⚠️ Cutting too much weight hurts safety.

• 5 words are enough

Word	What it means
Drag	Air resistance.
Downforce	Air pushing the car down.
Spoiler	Breaks up the airflow.
Diffuser	Helps the air under the car exit smoothly.
Power-to-weight	Power for every kilo.

🎯 Test yourself

🎯 Challenge 1 **What does downforce do?**

A) Presses the car to the ground | B) Lifts the car | C) Cools the engine

🎯 Challenge 2 **Is every wing functional?**

A) Yes, always | B) No, some are just for looks | C) It makes no difference

✅ **Answers:** 1) It presses the car to the ground. 2) No, some are just for looks.
